Simple task workflow within Django.

CHAPTER 1

Introduction

This package provides simple task-based workflow within Django.

CHAPTER 2

Installation

Use `pip` to install the package, preferably to a local `virtualenv`:

```
pip install django-taskflow
```

Then add the package to `INSTALLED_APPS` in the `settings.py` file.

Run migrations from the project main directory:

```
python manage.py migrate
```

Then add and run workflows.

CHAPTER 3

Workflows

To create a workflow, instantiate a `Workflow` object.

Operations are instances of classes derived from the `OpBase` base class.

4.1 Classes

- `Init`
- `Script`
- `OperatorExternalTask`
- `search`
